ACTONIX

DATASHEET

IT Asset Management

Know every device, every application and every paid licence across your Windows estate — collected continuously by the Actonix agent.

HIGHLIGHTS

Nine discovery sources

Registry, MSI, winget, AppX, file system, pip, npm, NuGet and services

Licence usage tracking

Install date and last-used for paid software

Warranty & lifecycle

Warranty status for major manufacturers, plus asset age

Risk-mapped inventory

Every application linked to its known CVEs

OVERVIEW

One source of truth for hardware and software

Actonix IT Asset Management gives you a complete, always-current picture of your Windows estate — from office desks to remote laptops. The same lightweight agent that patches your devices collects hardware, software, licence and warranty data, so there is nothing extra to deploy.

HARDWARE ASSESSMENT

Every device, in detail

Capability	What you see
Device specification	Make, model, serial number, CPU, memory, storage and graphics
Warranty tracking	Warranty status and expiry for Dell, HP, Lenovo, Toshiba and Microsoft devices, looked up from the device itself
Asset age & refresh planning	Identify ageing devices before they fail and budget replacements
Disk & battery health	Drive health, free space and battery wear
Firmware & security chips	BIOS version, TPM and Secure Boot status
Encryption	BitLocker state for every volume
Peripherals & network	Monitors, storage controllers, network adapters, IP and MAC details
Performance & uptime	Boot time, resource pressure and last restart

SOFTWARE INVENTORY

Nothing installed goes unseen

Actonix combines nine discovery sources, so it finds software that a single registry scan would miss — including per-user, Store and script-installed applications.

Classic installs

Windows registry and the MSI database

Package managers

winget, pip, npm and NuGet

Modern & system

Store (AppX) apps, Windows services and file-system scans

- **Version & patch level** — outdated and end-of-life software flagged automatically.
- **Vulnerability mapping** — each application matched to its CPE and enriched with CVSS, EPSS and CISA KEV data.
- **Shadow IT detection** — unapproved applications highlighted against your allow-list.
- **Lightweight collection** — CPU, memory and disk-aware throttling keeps users unaffected.

SOFTWARE ASSET & LICENCE MANAGEMENT

Stop paying for software nobody uses

Licence tracking focuses on paid software — free tools and built-in Microsoft components are left out, so reports stay relevant.

Install date & last used

See exactly when each paid application was installed and when it was last opened, on every device.

Reclaim idle seats

Find unused Adobe Photoshop, AutoCAD and other licensed seats and reassign them before renewal.

Subscription & renewal tracking

Keep renewal dates and licence counts in view alongside real usage.

Compliance reporting

Compare installations against what you own, ready for vendor audits.

OUTCOMES

What teams use it for

Cut licence spend

Reassign unused paid seats before renewal.

Plan hardware refresh

Warranty, age and health in one view to budget replacements.

Pass audits faster

Export audit-ready asset registers for ISO, DPDP and internal audit.
